Mohan Babu University
ApexPlanet Project

Academic Year: 2026

Abstract

The Campus Placement Portal is a web-based application designed to simplify and automate the campus recruitment process.

It provides separate interfaces for administrators and students.

Administrators can manage placement opportunities and applications, while students can register, view available jobs, apply for jobs, and track application status.

The system is developed using PHP, MySQL, HTML, CSS, and JavaScript and runs using the XAMPP local server environment.

Introduction

Campus recruitment commonly involves managing student information, job notifications, and applications.

The Campus Placement Portal provides a centralized digital platform for these activities and improves the efficiency of the placement process.

Objectives

Provide a centralized placement management system.

Allow administrators to create, edit, and delete job opportunities.

Allow students to register and securely log in.

Enable students to apply for available jobs.

Allow administrators to review applications and update their status.

Reduce manual work and improve transparency.

Technology Stack

Frontend: HTML5, CSS3, JavaScript.

Backend: PHP 8.

Database: MySQL/MariaDB.

Server: Apache using XAMPP.

Development Environment: Visual Studio Code.

Modules

Administrator Module: Admin login, dashboard statistics, job management, student management, application review, and application status updates.

Student Module: Registration, login, available jobs, job application, and application tracking.

Database Design

The project uses users, students, jobs, and applications tables.

The users table stores account information and roles.

The students table stores student-specific details.

The jobs table stores placement opportunities.

The applications table connects students with jobs and stores application status.

System Workflow

Admin: Login → Dashboard → Add/Manage Jobs → Review Applications → Update Status.

Student: Register → Login → View Jobs → Apply → Track Application Status.

Key Features

Role-based authentication, password hashing, admin dashboard statistics, add/edit/delete jobs, student management, job applications, application status tracking, and responsive interface.

Testing

The application was tested for student registration, login, job creation, editing and deletion, student job applications, duplicate application prevention, application status updates, and logout functionality.

Future Enhancements

Possible enhancements include email notifications, resume upload, advanced job search and filtering, analytics dashboards, online deployment, and automated application-status notifications.

Conclusion

The Campus Placement Portal provides a centralized platform for managing campus recruitment activities.

It reduces manual effort and allows administrators and students to manage placement activities efficiently through dedicated interfaces.
